

SERVICES

Missouri Department of Natural Resources

The attorneys at Sandberg Phoenix represent clients through the permitting process by the Missouri Department of Natural Resources. This includes our ability to assist clients in obtaining permits, which can include permits for air quality, wastewater, underground storage tanks, and other related environmental permits issued by the state. Additionally, we represent our clients, after a permit has been issued, in the event of an appeal of the permit by individuals not related to the permittee to obtain the best possible result for our clients.
